PROFESSIONAL SUMMARY

IT and Data professional with 4+ years of experience spanning systems administration, technical support, and data visualization across organizations in Somalia. Skilled in Power BI, Excel, SQL, and Python for building dashboards and reports, and experienced with Kobo Collect and ODK for field data collection support. Comfortable owning end-to-end IT operations while turning field and program data into dashboards that support monitoring and decision-making. Currently building toward a data science career through applied projects and continued study.

SKILLS

Data & BI: Excel (Pivot Tables, VLOOKUP/XLOOKUP, Power Query, VBA), Power BI (DAX, Power Query), Tableau, SQL (MySQL, SQLite)

Field Data & GIS: Kobo Collect, ODK, GIS Mapping

Programming: Python (Pandas, Matplotlib, Seaborn, Streamlit, OpenCV), JavaScript

IT Support & Systems: Hardware/software troubleshooting, Windows, Linux (Ubuntu, WSL), network support, user & systems administration

Web Development: React, Next.js, Node.js, HTML/CSS

Tools: Git, GitHub, VS Code, Cursor

WORK EXPERIENCE

System Officer — *HIMILO Organization for Development* June 2025 – Present

- Own IT operations across the organization as the sole System Officer — hardware, software, network connectivity, and user account/systems access — supporting every department.
- Provide technical support and troubleshooting for staff, resolving hardware, software, and connectivity issues to keep daily operations running smoothly.
- Build and maintain internal full-stack web applications (MongoDB, Express, React, Node.js) and support frontend/backend integrations for client-facing systems, working alongside an AI engineer.
- Support internal teams with Excel-based data compilation, cleaning, and basic reporting when data-related requests come in.

Data Visualizer & IT Support — *NAPAD – Nomadic Assistance for Peace & Development* March 2023 – February 2025

- Built Power BI dashboards for NAPAD's program clients, visualizing Payment Verification (PVM) and Payment Distribution (PDM) data to support monitoring and decision-making.
- Used Kobo Collect and ODK to support field data collection tools for payment verification and distribution monitoring, working closely with the mobile field team.
- Analyzed field-collected data in Excel and Power BI, building reports that helped the team catch and flag discrepancies before they became larger issues.
- Provided IT support to the mobile field team, maintaining laptops, data collection devices, and connectivity for day-to-day field operations.

- Delivered IT support across the office, setting up and maintaining computer systems and resolving day-to-day technical issues for staff.
- Cleaned and structured sales and operational data in Excel for internal reporting, supporting evidence-based decisions across departments.
- Designed and maintained data reporting workflows that reduced manual effort in monthly reconciliation.

PROJECTS

Somalia Displacement Forecast Dashboard / *Power BI · DAX · Power Query* / [View Project](#)

- Built an interactive Power BI dashboard analyzing 8.03M displaced people across 20+ Somali districts, broken down by conflict, drought, and flood.
- Designed forecast vs. actual comparison visuals with district-level slicers, enabling month-by-month trend analysis for a real humanitarian dataset.

SQL Business Data Analysis – Sample Superstore / *SQL · MySQL · SQLite* / [View Project](#)

- Analyzed 9,994 transactional records across 4 regions and 3 product categories, identifying \$2.3M in total sales and \$286K profit.
- Found that discounts above 30% consistently produced losses and flagged 1,871 loss-making transactions, including top loss categories, for review.

COVID-19 Data Analysis & Insights Dashboard / *Python · Pandas · Matplotlib · Streamlit* / [View Project](#)

- Built an interactive multi-country dashboard in Python and Streamlit to monitor case, death, and recovery trends, replicating a Power BI-style reporting workflow.
- Processed and cleaned a global public health dataset covering 180+ countries, applying time-series analysis to surface regional outbreak patterns.

Netflix Content & Viewership Data Analysis / *Python · Pandas · Matplotlib* / [View Project](#)

- Performed EDA on the Netflix catalog dataset to uncover trends in genre distribution, release year patterns, and content mix across 8,000+ titles.
- Produced 10+ visualizations, including heatmaps and time-series plots, summarizing content strategy shifts from 2010 to 2021.

EDUCATION

Bachelor of Computer Science — *Somali National University, Somalia*

August 2021 – January 2026

Majors: Data Science, Machine Learning, AI. Relevant coursework: Data Analysis, Databases, Programming Statistics.

CERTIFICATIONS

- [Data Analysis with Python – freeCodeCamp](#)
- [Data Analyst Bootcamp – Alex The Analyst](#)

PROFESSIONAL DEVELOPMENT

- **Data Science & Machine Learning:** Completed a Data Science & Machine Learning bootcamp covering data preprocessing, regression, classification, and clustering. Built and evaluated multiple models (Logistic Regression, Random Forest, XGBoost) through a capstone project predicting displacement event size using real Somalia IDP data (IDMC/HDX).
- **Advanced Excel for Data & Humanitarian Reporting:** Strong, hands-on Excel background (Pivot Tables, VLOOKUP/XLOOKUP, Power Query, VBA) built across IT support and data visualization roles — used daily for program and field data reporting.

LANGUAGES

Somali: Native

English: Professional working proficiency
